EDUCATION

Northeastern University

Boston, MA

Bachelor of Science in Computer Science | GPA: 3.8/4.0

May 2026

Concentration: Artificial Intelligence | **Minors:** Mathematics, Business

Awards: New Jersey Governor's School of Engineering and Technology, John Martinson Honors Program, Dean's List, PEAK Basecamp Research Award, PEAK Ascent Research Award

EXPERIENCE

Student Researcher | Goodwill Computing Lab

Sept 2025 – Present

Python, Data Analysis, Environmental Impact, Socio-economic Research, Datacenter Infrastructure

- Investigating intersection of datacenter infrastructure and socio-economic inequality by correlating intergenerational mobility metrics with economic and environmental impact datasets
- Analyzing the geographic and demographic implications of data center placement on local communities and environmental resources

Software Engineer Intern | Snowflake

Sept 2024 – Dec 2024

Machine Learning, LLM, RAG, Python, SQL, Streamlit, Snowflake, Deep Learning, Solution Design

- Architected end-to-end ML pipeline for Snowflake Certified Solution analyzing 1,000+ sales transcripts for six enterprise customers using RAG-based LLM with vector embeddings and sentiment analysis
- Engineered Streamlit dashboard with natural language query interface, converting user prompts into optimized SQL and Python for real-time data visualization and analytics

Student Researcher | SimBioSys Lab at Northeastern University

Jan 2023 – June 2024

Python, VMD, The Discovery Cluster, Git, MySQL, Flask, React, Research and Development

- Contributed to building a full-stack web application that models the glycan shield enveloping viruses
- Developed PDB file parser to extract and process structural data on viral proteins, automating data pipeline for biomedical research workflows

PROJECTS

ExamEngine | Python, TypeScript, Next.js, FastAPI, PostgreSQL, AWS, Docker

Dec 2025

- Built full-stack exam scheduling platform with Next.js/TypeScript frontend and FastAPI backend deployed on AWS; implemented DSATUR graph coloring algorithm with soft constraint optimization for conflict-free exam scheduling
- Achieved zero conflicts for 15,000+ students across 1,500+ course sections with sub-2-minute runtime, eliminating approximately 100 hours of manual scheduling per semester

Brain Hemorrhage CT Analysis | Python, Keras, Sklearn, UNet, Seaborn, OpenCV

April 2024

- Developed deep learning models for semantic segmentation and multi-class classification of brain hemorrhages using CT scans, achieving 0.4639 IOU with UNet architecture
- Implemented data preprocessing pipeline with augmentation techniques and deployed MobileNetv3 for efficient classification across four hemorrhage types

Affirm | iOS Development, Swift, Natural Language Processing, CoreML

Feb 2024

- Launched a personalized affirmation iOS application using Swift and Swift Playgrounds, enhancing user positivity and mindfulness
- Integrated Swift Natural Language framework with custom embedding models to analyze user sentiment and generate contextually relevant affirmation content

Emotion-Based Style Transfer on Visual Art | Python, PyTorch, VGG-16, Neural Style Transfer

June 2021

- Trained CNN on ArtEmis dataset for emotion-conditioned style transfer to visual art, contributing novel approach to affective computing
- Authored research paper published in IEEE Xplore and presented at MIT URTC

TECHNICAL SKILLS

Languages: Python, Java, SQL, JavaScript, HTML/CSS, Swift

Frameworks & Libraries: React, Next.js, FastAPI, Flask, Node.js, TensorFlow, PyTorch, Keras, pandas, NumPy, Scikit-learn

Tools & Technologies: Git, Docker, AWS, MongoDB, PostgreSQL, Streamlit, Jupyter, VS Code, XCode
